Profile

I am a new second year Computer Science student, having transferred out of a Biochemistry major after finding my passion in Computer Science a little under a year ago. I am an extremely fast learner, and a strongly self-driven individual, willing and hoping to learn as many industry-applicable skills through a summer software engineering internship.

Employment History

Product Management Intern, Metadium

May 2018 – Jul 2018  Seoul

- Designed the token economy for the Metadium blockchain identity platform
- Wrote and published a Medium article comparing the Delegated Proof of Stake (DPoS) and Proof of Authority (PoA) consensus algorithms for use in a blockchain environment
- Developed a smart contract in Solidity for a decentralized application (dApp) to trade cities between addresses on the Ethereum Ropsten Testnet

Student Researcher, Southlake Regional Health Centre

Jun 2015 – Sep 2017  Newmarket

- Helped introduce a new method of blood testing at the emergency department, by gathering data in real-time from patient charts and comparing wait times between using the new method of blood testing vs the old
- Designed a new layout for the emergency department, to improve patient flow and decrease 90th and 50th percentile wait times

Education

University of Toronto, Bachelors in Statistics

2018 – 2021  Toronto

University of Western Ontario, Bachelors in Biochemistry

2015 – 2018  London
